EDUCATION

Bachelor of Science - Computer Science

Western Governors University

Expected Sep 2026

Remote

Bachelor of Science - Psychobiology w/ Specialization in Computing

University of California Los Angeles

Sep 2016 - Feb 2021

Los Angeles, CA

SUMMARY

Aspiring full-stack software engineer with professional experience in Ruby on Rails, JavaScript, and Ember.js, complemented by a strong academic foundation in computer science and psychobiology. Builder of Frigiradium, a food inventory management app using Django, React Native, and PostgreSQL. Passionate about solving real-world problems through clean, testable code and continuous improvement. Currently pursuing a second B.S. in Computer Science and actively pursuing impactful software roles.

SKILLS

Languages	Python JavaScript Ruby HTML CSS
Frameworks/Libraries	Django React Native Ember.js Ruby on Rails Node.js Express
Databases	PostgreSQL MySQL
Testing	pytest RSpec Capybara QUnit
Version Control	Git GitHub GitHub Actions GitLab
Certifications	CompTIA Security+ CE

EXPERIENCE

Software Engineer

Sep 2022 - Sep 2023

Ontra

Remote

- Contributed to the technical architecture and design of web-based applications, leveraging Ember.js and Ruby on Rails to deliver scalable and user-friendly software solutions.
- Developed and maintained core features for the company's platform by implementing modular Ember.js components and refactoring legacy code, ensuring consistent performance improvements.
- Built and optimized back-end solutions using ActiveRecord queries and Ruby on Rails, integrating seamlessly with internal systems and third-party APIs.
- Designed and executed robust unit and integration tests with RSpec, Capybara, and QUnit, maintaining high code quality and ensuring reliability during CI/CD pipelines.
- Supported system migration projects by collaborating with cross-functional teams, improving legacy systems through efficient refactoring and modern coding standards.
- Worked in an Agile Scrum environment, actively participating in sprint planning, daily standups, and retrospectives to align deliverables with business priorities.
- Administered version control using Git and GitLab, managing feature branch workflows to ensure seamless collaboration across distributed teams.

Specimen Technician I

Feb 2025 - Present

Quest Diagnostics

San Juan Capistrano, CA

- Processed and validated biological specimens in a high-throughput lab environment, ensuring adherence to strict quality control protocols and rapid turnaround times
- Maintained digital records using internal lab information management systems (LIMS), highlighting attention to detail and accuracy in fast-paced environments

Case Management Assistant

Aug 2024 - Feb 2025

Children's Hospital of Orange County

Orange, CA

- Coordinated medical equipment logistics and patient follow-up across departments and vendors, managing complex workflows under tight deadlines
- Documented care coordination steps in electronic health systems, ensuring compliance with HIPAA and internal process standards

PROJECTS

Frigiradium (In Progress)

2025 - Present

Full Stack Developer

Remote

- Building a mobile food inventory app from scratch using Django and React Native to help households reduce food waste through expiration tracking and inventory alerts.
- Designed Django models for inventory, users, and households; implemented model signals and one-to-one relationships
- Wrote unit tests with pytest and configured GitHub Actions to run tests automatically on each commit
- Planning future features like low-stock alerts, multi-user household sharing, and AI-generated recipes
- Code: <https://github.com/jbmtch/frigiradium>
